Hotfix 1.08.01:

Small update to fix some quality-of-life improvements for PC controllers.

PATCH

- Improved direct input controller detection. *This should mean issues where controllers were being picked up erroneously are reduced.*
- Added a configuration tool option to disable direct input controllers. *If you're still having issues, use this to disable legacy controller support.*
- Added an inifile option to disable the “critical control” warnings. *This should aid setup in cases with unusual “joysticks”, such as headtrackers using Vjoy.*
- Added an inifile option for scaling the FOV from its default size. Not compatible with VR mode. *Intended for advanced users only.*
- Added “force freelook” inifile option which causes the freelook control to stay on continuously. *This should be useful for headtracking setups.*
