=head1 NAME Paws::CodeGuruProfiler::SecondsFailed =head1 USAGE This class represents one of two things: =head3 Arguments in a call to a service Use the attributes of this class as arguments to methods. You shouldn't make instances of this class. Each attribute should be used as a named argument in the calls that expect this type of object. As an example, if Att1 is expected to be a Paws::CodeGuruProfiler::SecondsFailed object: $service_obj->Method(Att1 => { Timestamp => $value,..., Total => $value }); =head3 Results returned from an API call Use accessors for each attribute. If Att1 is expected to be an Paws::CodeGuruProfiler::SecondsFailed object: $result = $service_obj->Method(...); $result->Att1->Timestamp =head1 DESCRIPTION Describes the number of seconds that a profiler failed in a particular profile. =head1 ATTRIBUTES =head2 Timestamp => Str The timestamp of the C event
